

Equipment List and Costume

Canon 550D- The canon 550D has great focus which will be beneficial when we are filming in relatively low lighting, the quality of the image is high and as a group we are familiar with the camera.

Tripod- We are using the tripod in order for our shots to be steady.

Sound kit and Fishpole- We are using a fishpole and sound kit to get direct sound including dialogue as clean as possible.

Solid state- We are using the solid state to record the sound onto a device.

2 Dedos- We are using dedos to focus the light source onto the actor.

2 Kenos- The Keno lights are to light the background behind our actor.

Light Meter- The Light meter will help us determine the exposure for each shot.

Field monitor- We decided to use a field monitor so that we have a bigger screen and so that the camera operator and director can both watch the footage and look for any framing issues or continuity errors.

Headphones- To listen more intently to the dialogue being spoken during filming including the levels being recorded.
